Wave panel glide system by Silent Gliss

Waves of Shade

The Wave panel glide system from Silent Gliss creates the perfect blend of light and shade. The clear, elegant wave forms allow natural light to enhance your room and give you freedom to explore an array of visual and shading effects.

Whether used as an elegant window treatment or as a striking room divider, there is virtually no end to the creative possibilities.

Winner of the Red Dot Award: Product Design 2017 with the observation, 'The design is both elegant and contemporary and its organic, curved shape gives it an individual touch.'

Form and Function

The system works by attaching curved fabric carriers to parallel profiles. The fabric panels move connected or unconnected across the length of the system.

Versatility and Style

Connected panels give total coverage of an area and are easily operated by moving the leading panel.

Unconnected panels give the flexibility to position the fabric in different positions along the length of the track.

Choose from a wide range of fabrics from the The Collection by Silent Gliss.
